Important Information Regarding Upcoming SRP Construction

Dear Valued Customer/Landowner:

SRP has received a request to provide electrical service for a commercial customer for a privately owned parcel located near South 48th Street and East Thistle Landing Drive in Phoenix, Arizona. As an electric utility, SRP is committed to delivering affordable and reliable power to all customers.

Scope

Construction is planned to begin in July 2026 on new electrical facilities including a 69-kilovolt (kV) switchyard, to be known as the Cactus Bloom Switchyard, and associated 69 kV transmission lines. All planned electrical infrastructure will be located within an SRP easement or on the customer-owned parcel.

The project site is located on the southeast side of 48th Street and Thistle Landing Drive. The new Cactus Bloom Switchyard, to be located on the customer's property, will connect to SRP's existing Big Spinner-Roe 69 kV transmission line, located immediately west of the project site. The Cactus Bloom Switchyard will serve a customer-owned 69/34.5 kV distribution substation also located within the project site. Please see the map on the back side of this letter for a visual of the location of SRP's Cactus Bloom Switchyard, overhead line, and the customer's substation.

Anticipated Construction Timeline

The construction of the Cactus Bloom Switchyard is projected to occur between July 2026 and January 2027. Installation of the new 69 kV overhead line and poles is expected to take place October 2026 through January 2027.

Switchyard

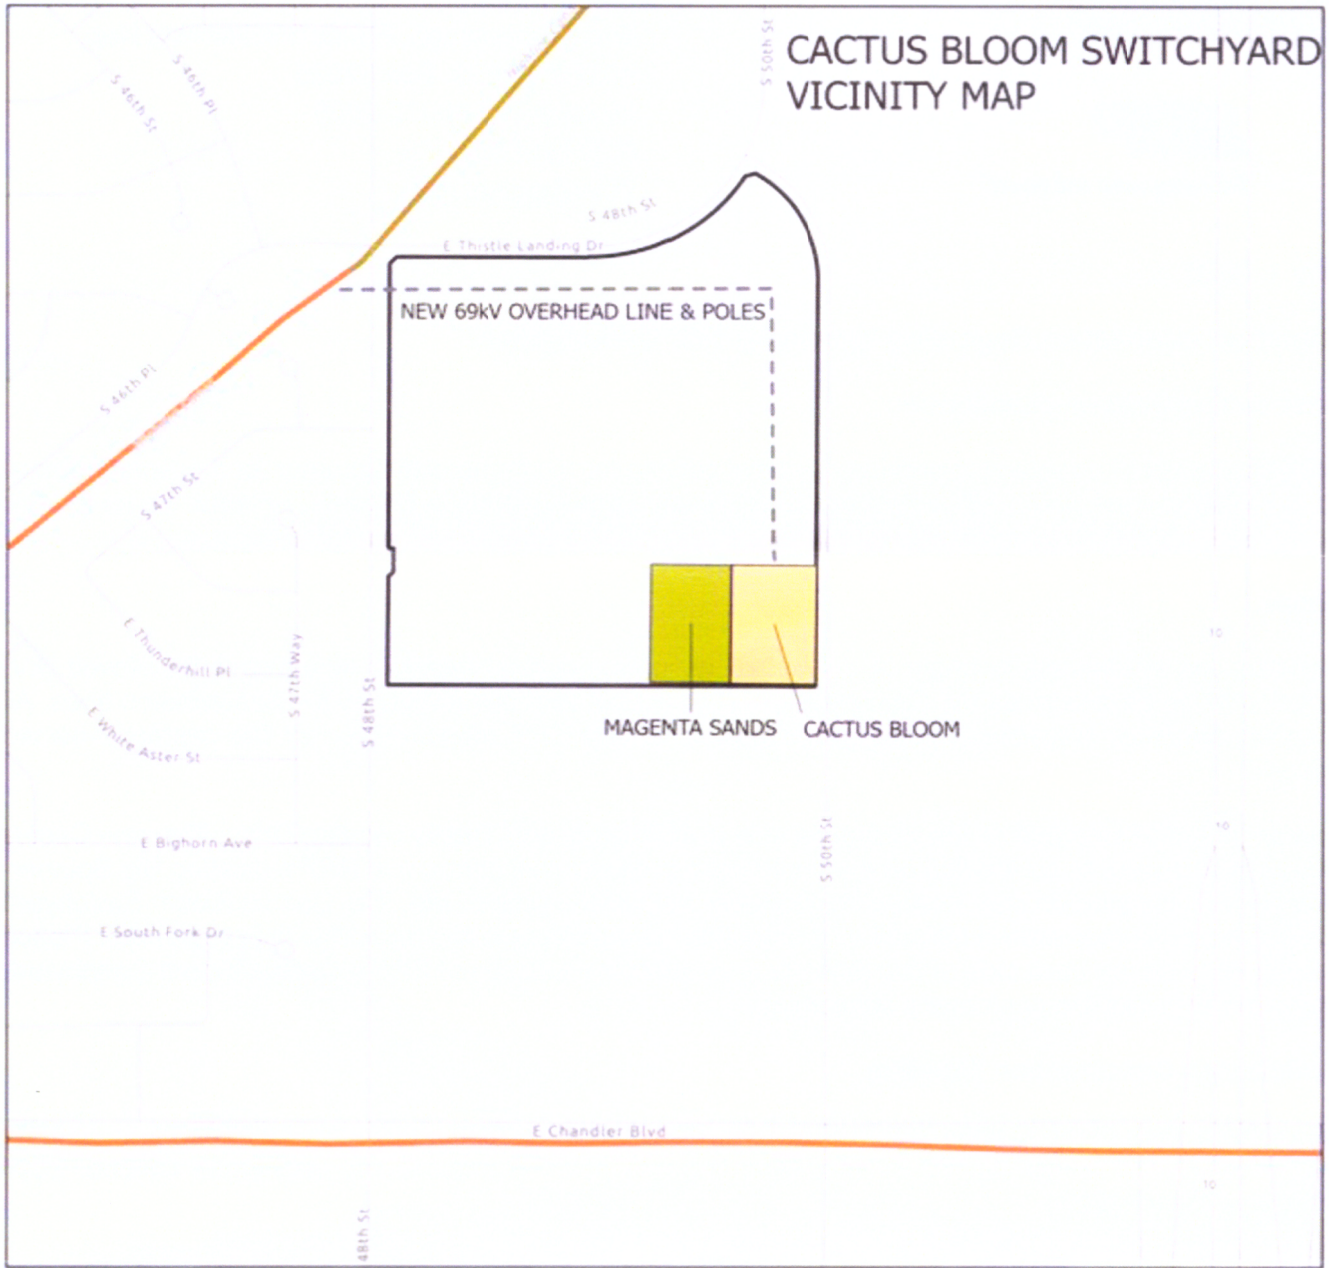

A switchyard is a type of substation facility that connects two or more transmission circuits of the same voltage together (therefore no transformers are required). The switchyard monitors and protects each high-voltage circuit and provides operational control to ensure the system is safe, reliable, and maintainable.

For questions, please contact Eric Goodenough at **(602) 236-0308**.

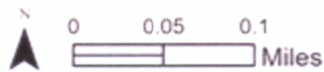

Sincerely,

Eric Goodenough
